Dear Dr. Durrant

Robert WILSON - Code A

Code A Code A

Diagnosis:- Left greater tuberosity fracture (21.09.98).

I assessed this gentleman in Fracture Clinic today. He sustained the above injury yesterday when he fell. X-ray reveals there to be some displacement of the fragment. Mr. Wilson was not keen to undergo surgical intervention. Today he is fully aware that he will have restricted range of movement from his shoulder should it unite in the position.

I have discussed the situation with Mr. Richards who feels that we may respect the patients wishes in this case. However we will review him again in two weeks time. If the fracture becomes further displaced we will have to more seriously consider operative intervention.

I note his treatment on Spironolactone, Frusimide, Thiamine and multi vitamins.

Yours sincerely

Dr. C.J. Hand FRCS
Specialist Registrar in Trauma and Orthopaedic Surgery
