Dr M H Cummings
 Consultant Endocrinologist
 Department of Medicine
 Queen Alexandra Hospital

Dear Dr Cummings

WARD VISIT - WARD F4, QAH

Eva PAGE, dob Code A

H/a: Code A

Thank you for asking me to see this lady, whom I visited twice on the ward. She was admitted following an acute confusional state, and found to be in fast atrial fibrillation and mild CCF. Unfortunately a CT scan of the head could not be done because of her confusion and restlessness. When I saw her today she is still extremely confused and refusing to eat or drink and cooperate. She is mobile and continent.

I fully agree that she may have sustained a small CVA. However, as the problem is not her mobility but confusion, I feel she has to be assessed by the psychogeriatricians and I would be very grateful if you could refer her.

Yours sincerely
