Reference Mrs Gladys Richards

DOB

**Code A**

Thank you for taking Mrs Richards back under your care.

After arriving here on Friday 14/08/98 Mrs Richards underwent a closed reduction of right hip hemiarthroplasty. This was done under IV sedation. The reduction was uneventful, however she was rather unresponsive following the sedation. She gradually became more responsive but was unable to pass urine, so it was decided to pass an indwelling catheter, which still remains in situ.

She has been given a canvas knee immobilising splint to discourage any further dislocation, and this must stay in situ for 4 weeks. When in bed it is advisable to encourage abduction by using pillows or abduction wedges. She can however mobilise fully weight bearing.

Yours aise
