

Sky Channel 585.

Sunday 14th 12.15

Is it possible that Mrs Richards died
as a result of a coma induced by
diamorphine + mix of drugs and no
guards?

PROFESSOR Willocq expert in pain management
care
Mr P... 66
gives excessive diamorphine
for his needs

If Mrs Richard was not
in pain or distressed at the
moment of ~~12th~~ - she had not had
18th enough since 04:30 am
would a syringe driver be
appropriate when medical records
show no assessment of the
cause of pain.

^{questioned}
We ~~suggested~~ Dr Bacon took as
the cause of Mrs Richard's pain
had not been established should she in your
have considered the SD not to have been
used once uncontrolled
should the level of diamorphine have
been reassessed or reduced?

Did you think that by putting up the syringe driver...

3 cases

Use of punctures inappropriate for
LWR condition

2 other medics - doses
contributed to death

5 prescriptions did not contribute

Did not hear from
Professor Gay Ford (July not shown)

prepared report for H&S pt
2001

Black

NO explanation of why she was in pain in the notes.

NO rehabilitation

Do you think Mrs Richards received an adequate diagnosis of her condition or her family

Dr Barton stated that s/o (17h) did not prescribe for Mrs Richards specifically but prescribed on the basis of an elderly painless cancer patient.

Do you think as an expert it is acceptable for a Dr to prescribe 'in general' rather than specifically for a patient.

If you had received a 91y-old lady in hospital, how long would you have assessed her + when?
