Haslar RBE

Patrol to ADE for reduction of dislocated @ His.
 No change in treatment since transfer to us 11/8/98,
 except discontinuation addition of Gramoxol PRN.

10mg Gramoxol given at HSO.

We will be happy to take her back following
 reduction of file dislocation.

This is not correct. (See Drug Chart)

Oramorph given by Philip Beed. 11 August shortly after admission. X 2 plus 12 13 14 August. Lesley Mack informed me that she had complained on the 12.8.98 and mother was taken off it - she was not.

What time did my mother arrive at Gosport - I understood she was accompanied by Lesley. There was some haste to commence oramorph despite the fact that the letter from Hasler to the August (typed up on the evening before discharge from Hasler) states pain killer PRN to control. Has a Detective checked the Hasler file which was missing from the papers sent to Forest? (D. I have to act as 'law Expert' - Detective.

See also Baird's comments 14.8.98 Very sensitive to Oramorph
 Mother was 'out for the count' Page 29 of 114.
 Oramorph written up by Baird 11.8.98. Beed quiet off the mark.
 Ctl Reprt. "No pain assessment procedures in place."
 If my mother was 'very sensitive to oramorph' why didn't Beed query and cease the dose?
 Pain was not a problem - Beed does not know or choose to know the meaning of a demented patient and a scream.
 Lesley will continue as the Nursing Home notes continue
 wait...

Code A

Drugs written up without proper assessment - See Reed's letter - Hadan staff statements - Hadan file - My mother was transferred to Gosport "for 2-4 weeks" to give Lesley time to find a Suitable Nursing Home on discharge. See Hadan file notes.

Barbar notes. 11.8.98. "Not obviously in pain" why did Beed administer diamorphine? 14.8.98. 'Fell out of chair last night' who told her (Barbar) Nat? She fell at 13.30. previous day. See

Gosport file. My mother did not need a further surgical procedure. Barbar seems incapable of assessing the X-ray. It is not up to her to comment.

Barbar is convinced my mother is about to die. Drugs appropriate for palliative care (last stages). I am not a medical expert but I did spend the best part of 2 years in (living here every day) at the Royal Marsden. I was aware of the palliative care drugs for my husband & these were discussed fully with my husband and myself. I have also had experience as a volunteer "gator" in the local hospice.

Page 30 of 114.

Why did my mother have to undergo a X-ray at Gosport.
 A GP should be capable of recognising a dislocation. Barbara
 was on the ward when my mother fell 13.8.98. Why didn't
 she examine my mother. I understood Karen Reed saw
 my mother in the Day Room shortly after fall discovered.
 Did she fall in the Day Room? Is that why they did not
 know how long she had been on the floor. Why was
 the Day Room unsupervised. There are discrepancies here.
 Why hasn't Karen Reed been interviewed and not come
 forward? Karen Reed one of Lesley's daughters and an
 ex Harlow or Hospital Nurse.

17.8.98.

Remained unresponsive for some hours. - Not surprising
 with Oramorph 11, 12, 13, 14 followed by IV Sedation,
 20. Harlow.

"Only give Oramorph in severe pain." Reed quiet off the
 mark. My mother was not screaming, but I think she
 was in pain or groaning/moaning. She had been covered
 on a sheet from the ambulance - 'tipped' onto the bed onto
 the right hip. Reed had been informed there was no
 canvas. A canvas was on the back of the chair
 in my mother's room. Why didn't Reed ensure that it
 was used to transfer my mother from the ambulance to
 the bed. See CHI Report and my statement (Balderstone).

18.8.98.

"Still in great pain" Rubbish - She never regained consciousness
 from recovering from X-ray approximately 4.30 17.8.98.
~~She~~ My mother was talking to me whilst I accompanied her
 to X-ray holding her hand. Lesley was there. She lost
 consciousness in X-ray. Reed gave her an injection
 at 1pm and another just before she went down to X-ray
 approx. 3.45. Do not inject Oramorph. See my
 statement. I strongly question the Drug chart for 17.8.98

Mother received nothing after recovering from X-ray and Lesley and
 I did not leave until well after 8.30pm. If mother was
 given Oramorph on the 18th. 2.30am and 4.30am did
 they wake her up to give it to her by mouth? Mother was 'out'
 when we arrived on the 18.8.98 shortly after 9am on the 18.8.98
 when we were interviewed by Reed alone.

Page 62 of 714.

Hyozine given on 18.8.98. 400 mg. by Beed. Hyozine dehydrates. Barton does not mention it until the 21.8.98

Page 30 of 714. Beed jumped the gun again

Hyozine given 18.8.98 before Barton's instructions.

Times of Sump drive (from 18.8.98) not correct.

Sump drive times do not coincide with times given

on P. 63 of 714. I stayed overnight from the 18.8.98 onwards.

See medical file and history from the 19.8.98. She can confirm Sump drive 'replenished' but no note is a file.

The times on the accounts given. If Beed gave 400 mg on the

Sump Drive how much did Joyce give at a different time.

P. 63 of 714.

↑
was on
18m.

P.T.O.

P.461 of 714.

My mother was not admitted on the 17.8.98 with a diagnosis of ~~pneumonia~~ bronchopneumonia following broken hip. Nor was treatment of Sympie ~~given~~ given on the 20.8.98. It was set up on the 18th.

It would have been 'normal' in palliative care for the Sympie driver not to have been set up more than 24 hours before death. — only as a last resource even in cancer deaths it is not set up until the last few hours, which sometimes lasts 24 hours but usually far less. I am not a medical expert but I have witnessed this on several occasions at the Harnden (my husband & other patients) & another hospital in Essex with a cancer patient in the last few hours. They were not kept unconscious for days. I do not think my mother was anywhere near death on the 17/18 8.98.
