Dear Tony

Norma WINDSOR Code A
 Code A

I reviewed Mrs Windsor today. She is actually very much better on the steroids. Unfortunately we do not have a definitive diagnosis. Pemphigoid has been top of the differential diagnosis list and although the recent histology showed a sub epidermal blister immunofluorescence both direct and indirect was negative.

At present her skin is clear, she is not itching, her CLL seems under control. She is anxious to have her cardiac bypass while she is in good shape.

Kind regards

Yours sincerely

Code A
