

STROKE DISCHARGE DESTINATIONS 1999/2000

Compiled by Jane Williams - Senior Nurse Stroke Care

Acute data

Due to the closure and subsequent reduced activity of Mary Ward since November 1999, it has not been possible to collect complete acute activity data. The table overleaf includes data from acute stroke admissions for Ann and Victory Wards as the 6 acute stroke beds were divided between them during the bed closures, but acute stroke admissions occurred throughout the acute wards.

FSSR

Fast stream stroke activity has remained stable.

Area	1997-1998	1998-1999	1999-2000
Guernsey SMH	180	176	181

SSSC

Elizabeth ward activity has remained stable.

Slow stream stroke activity in the community hospital beds has decreased for the third year running (see table of number of discharges below). The cause is unknown.

Area	1997-1998	1998-1999	1999-2000
Elizabeth QAH	136	141	141
Rosewood SCH	62	27	21
Daedalus GWMH	44	45	25
Cedar PCH	21	20	14

STROKE DISCHARGE DESTINATIONS 1999-2000
ACUTE STROKE ACTIVITY - MARY, ANN AND VICTORY WARDS

Destinations	Age 65-69	Age 70-74	Age 75+	Total	%
