Dear Tom

**Code A**

As you know Mrs Windsor is on my waiting list for coronary artery bypass graft surgery, she was placed on the list in July 1999. She is well known to have chronic lymphatic leukaemia. As you are probably aware she developed some lymph node enlargement in her axilla. I have been sent a result of the histology of biopsy of one of these lymph nodes which clearly demonstrates that she now has lymph nodal involvement of this leukaemia. I would therefore be grateful if you could advise me if she now needs to undergo a course of chemotherapy and if this is the case if we should suspend her on the waiting list for coronary surgery.

Best wishes.

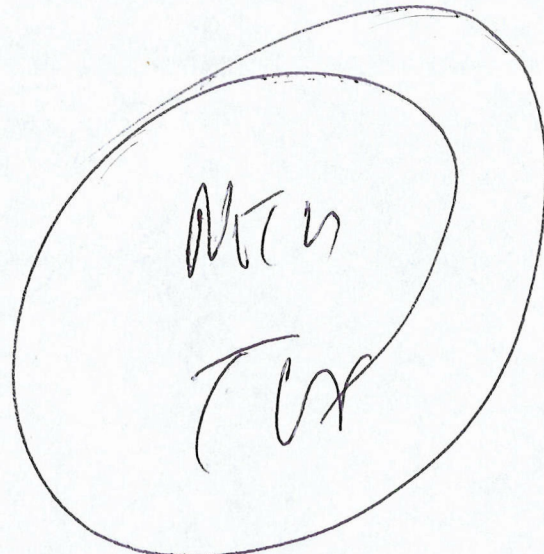

Yours sincerely
